Local woman diagnosed with barium toxicity

Facebook group forms to pursue class-action 'geo-engineering' lawsuit

By BRIDGET LEWISON
The Standard

BULLHEAD CITY, Ariz. — A 62-year-old Bullhead City woman has 28 times the normal level of barium in her blood, according to lab results issued Nov. 23.

Normal levels should be at or below 10 mcg/L (parts

per million), but her's registered at 280.

The sample was tested by NMS Labs, based in Pennsylvania.

She is now among about two dozen people in Mohave County who have tested positive for heavy metal toxicity. Others have verified through lab testing high levels of aluminum, strontium and uranium.

In response to what Golden Valley activist Al DiCicco calls an unwillingness to "properly investigate what is going on with the health of the people," he has formed a Facebook group called "Chemtrail Geo-Engineering Lawsuit." The 300-plus member group aims to pursue a class-action lawsuit against county, state and federal agencies

and elected leaders over what they say are negative health effects from geo-engineering.

Geo-engineering is a process used to manipulate the climate to counteract the effects of global warming from greenhouse gas emissions. The process has allegedly occurred worldwide for decades.

For example, the *San Luis Obispo* (Calif.) *Tribune* recently published a notice of intention from the Santa Barbara County

Water Agency to conduct a weather-modification program to increase rainfall by seeding clouds with silver iodide between Nov. 15, 2011, and April 15, 2012.

The group takes issue with the weather-modification program because it introduces substances into the environment. Silver iodide is considered a hazardous substance and a toxic pollutant by the U.S. Environmental Protection Agency. Chronic ingestion of the substance can cause

drinking water and our food" has been viewed almost 3,000 times.

"I'm in contact with people all over the world who are well aware of the reality of geo-engineering, and the harm that is being done to humans, plants, food production and animals," DiCicco said.

Although DiCicco says geo-engineering is occurring, "there are still many who do not believe, refused to investigate, and failed to take any action whatsoever."

"We are now at the point where we have exhausted all avenues for seeking assistance. We are now prepared to file a lawsuit against all those who are involved, and all those who have responsibility and a duty, and are being paid with our tax money, to investigate and stop such crimes against humanity."

The group is seeking to pool donations and hire a law firm to represent it. The Arizona Department of Environmental Quality, the Mohave County Department of Health, Arizona Gov. Jan Brewer, the Federal Aviation Administration, the Environmental Protection Agency and President Obama could be among the defendants.

DiCicco said he encourages all to thoroughly investigate geo-engineering, and that anyone who is ill should insist their doctor conduct tests for heavy metal toxicity.

The Facebook group can be found at www.facebook.com/groups/131756470228822.

skin rashes, weakness, anemia and depression.

DiCicco has been in contact with documentary filmmaker Michael J. Murphy, whose film "What in the World are They Spraying?" explores the phenomenon of chemtrails. The film proposes that chemtrails are part of a geo-engineering program that uses jet planes to spray a solution into the atmosphere. The solution is said to contain barium, aluminum, strontium and other elements, which are supposed to reflect sunlight and cool the planet.

A YouTube video of the October Mohave County health board meeting showing county epidemiologist Anna Scherzer explaining the elements are "coming from our
